Technical Specifications

Model	C2K
Resolution	1920*1080 , 2MP
Special Features	NIGHT VISION, unidirectional-way Audio, Motion Detection, Sound Detection
Network	wifi
Function	Wide Angle, Two-way Audio, NIGHT VISION, RESET, Built-in Mic
Video Compression Format	H.264
Data Storage Options	Full HD, Cloud, Memory Card
Application	Indoor
Support	wifi

Description

Introducing the ultimate solution for discreet surveillance: our mini WiFi camera. Equipped with a built-in 250mAh battery, it operates for approximately one hour on a full charge. But, for uninterrupted recording, simply plug it into a USB charger or power bank to enjoy 24/7 monitoring. Connect effortlessly to your room's 2.4GHz Wi-Fi router and access live video feeds or playbacks from anywhere at any time.

This wireless camera offers smart notifications, sending images directly to your phone when motion is detected. Stay connected by logging into the app for real-time updates, ensuring you never miss a vital moment. The camera automatically loops, overwriting the oldest SD card files when full to guarantee continuous recording without interruption.

One user can easily manage multiple cameras, and the app supports several devices simultaneously. The camera features its own hotspot, allowing it to record without Wi-Fi; just insert an SD card (not included), switch it on, and the mini WiFi camera will automatically capture and save HD video files. It also functions offline, recording even without an internet connection.

Designed with six built-in infrared lights, this camera ensures visibility in low-light conditions (with no-glow functionality) and can capture clear footage up to 5 meters away, making it ideal for home security or monitoring caregivers without drawing attention. Its internal magnet allows for easy attachment to any metal surface.

Experience remarkable clarity with HD video recording at a stunning 1920x1080P and 30 frames per second. This versatile device boasts features including video and photo capture, loop recording, motion detection, infrared night vision, time display, and a 120° wide-angle view, effectively monitoring any area within standard distance. With a fully charged battery, enjoy 50 to 60 minutes of reliable recording time.
