CPU	JL
Sensor	1064
Resolution	FULL HD 1920*1080 (Front/Interpolation)/640x480P (Rear VGA)
Files format	MOV/AVI(Video) ,JPG (Photo)

Description

1080P FULL HD TOUCHSCREEN DASH CAM

Recording at an impressive resolution of 1920*1080 30FPS, both front and rear cameras simultaneously capture the road in stunning detail. The full HD lens paired with a 4" large LCD screen ensures clearer videos and images, allowing for key moments to be replayed even at high speeds.

170° SUPER WIDE ANGLE & NIGHT VISION

The ultra-wide field of view minimizes blind spots and captures more detail to represent the actual scene. This advanced lens technology enables you to see and document everything in remarkable high definition, regardless of the time of day.

LOOP RECORDING & SUPPORT FOR 128 GB SD CARD

The loop recording function guarantees continuous recording, ensuring no moments are missed. Once the memory card is full, the camera automatically overwrites older videos. This dash cam is compatible with micro SD cards of up to 128GB (card not included).

G-SENSOR EMERGENCY ACCIDENT LOCK

Featuring an integrated G-sensor, the camera automatically secures the current video upon detecting any collision or shake, preventing it from being overwritten and saving it in a dedicated event folder. This safeguards your footage and ensures your evidence is protected.

SIMPLE INSTALLATION & OPERATION

Setting up and using Cybernautt B2X dashcam is straightforward, with illustrated guidance in the user manual. The included suction mount can be easily affixed to any spot on your windshield in just seconds. Simply insert an SD card (not included) and connect it to a power source to begin.
