

Automatic Water Level Controller

This controller is used to maintain the water level in the over head tank @ Residential / commercial buildings, it is a combination of water level controller and sequence timer. by using this we can control the run time of pump and also ensure minimum rest time as per our wish. They come with two sensors one for preventing the over flow, another for protecting against Dry run of Pump due to lack of water at source.

SIMPLE to fix
EASY to operate
LONG Life

Features:

★ Micro Controller Based Circuit:

for Accurate and flaw free operation.

★ Over Flow Protection:

prevents wastage of water and power.

★ Dry Run Protection:

protects the motor from burning out .

★ Cyclic Timer Function:

can effectively used in low-yielding well without wastage of power.

★ Off Timer Function:

Can have good control over the pump usage.

★ High Quality Fr 4 Grade Pcb:

Leads to Long Life of PCB.

★ High Quality Powder Coated Chassis

★ Simple To Install

★ Custom Design Available

Compatible With:

Jet Motor Pump,
Compressor Pump,
Monoblock Pump
